Self-Introduction

Hi, Dr Sun. My name is Zhi Su and you can call me Simon. Now I am doing my PHD program under ece department with my advisor Dr. Flueck.   My major is relating to the power system. Actually, I only know Matlab and a little about language C. Also I have no such experience for scientific computing and literarily have no clue about the parallel computing before this class.

When talking about the reason why I enroll in this calss. One is since power grid or power system is a scale system. When computing the power flow all over the system, we need do a lot of computing. That's really time-consuming. So I want to learn the way how to minimize the computing time in this class. The other one is my advisor asked me to do it.

I wish I could make progress step by step.
